GIFy-BOX

Get 5 poses ready & press the button to start

A PROJECT BY

hochschule mannheim

Getting analog picture strips from a photo booth is fun, but why not picking it up as a digital animation as well?

Squeeze into a photo booth with four people, trigger the switch and start making faces. When done, you receive a printed version of the session. The only problem is to share it in social media with an animation.

Thus we created the „GIFy-Box" to satisfy the needs of the digital era - now you can share your animated session anywhere you want.
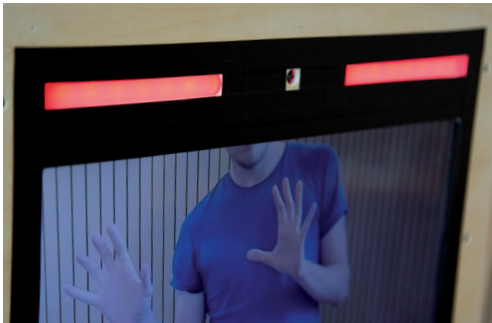

1. Grab your friends and get in front of the „GIFy-Box". Think of some poses or just improvise.

2. Press the trigger, look into the camera and get ready for the pictures.

3. The light strip will fill up towards the camera. When it reaches the camera, a photo is taken.

4. After all pictures are taken, they are compiled into a single animation and replayed on the screen.

5. Additionally, you receive a receipt with the URL, where you can see and download your animation.

Have fun sharing!
